OUR PRODUCTS AND SERVICES

› Surveillance Systems

The finest security system features are recognized when it best protects your territories as well as your loved ones. That being recognized, there are rapid advances in security technologies such as video and CCTV surveillance security systems. We at Haytech ensure security to be at the cutting-edge of all our services and products.

Why prioritize this service?

With the increasing crime rates in Tanzania, having video surveillance keeps your work place and home secured from recurrence of sabotage and fraudulent claims, while security cameras are an observable crime restrictor. We at Haytech Systems make it our priority to design a security camera system that will answer to all your security concerns. Apart from only providing our clients with our top branded products, we also ensure to take a step beyond and assist in the provision or recommendation of extra security features such as motion sensors or lights. We closely examine our clients space exterior and interior to recommend for the best blind spots as well as assimilate the cameras with data storage for user-friendly access on the footage recording.
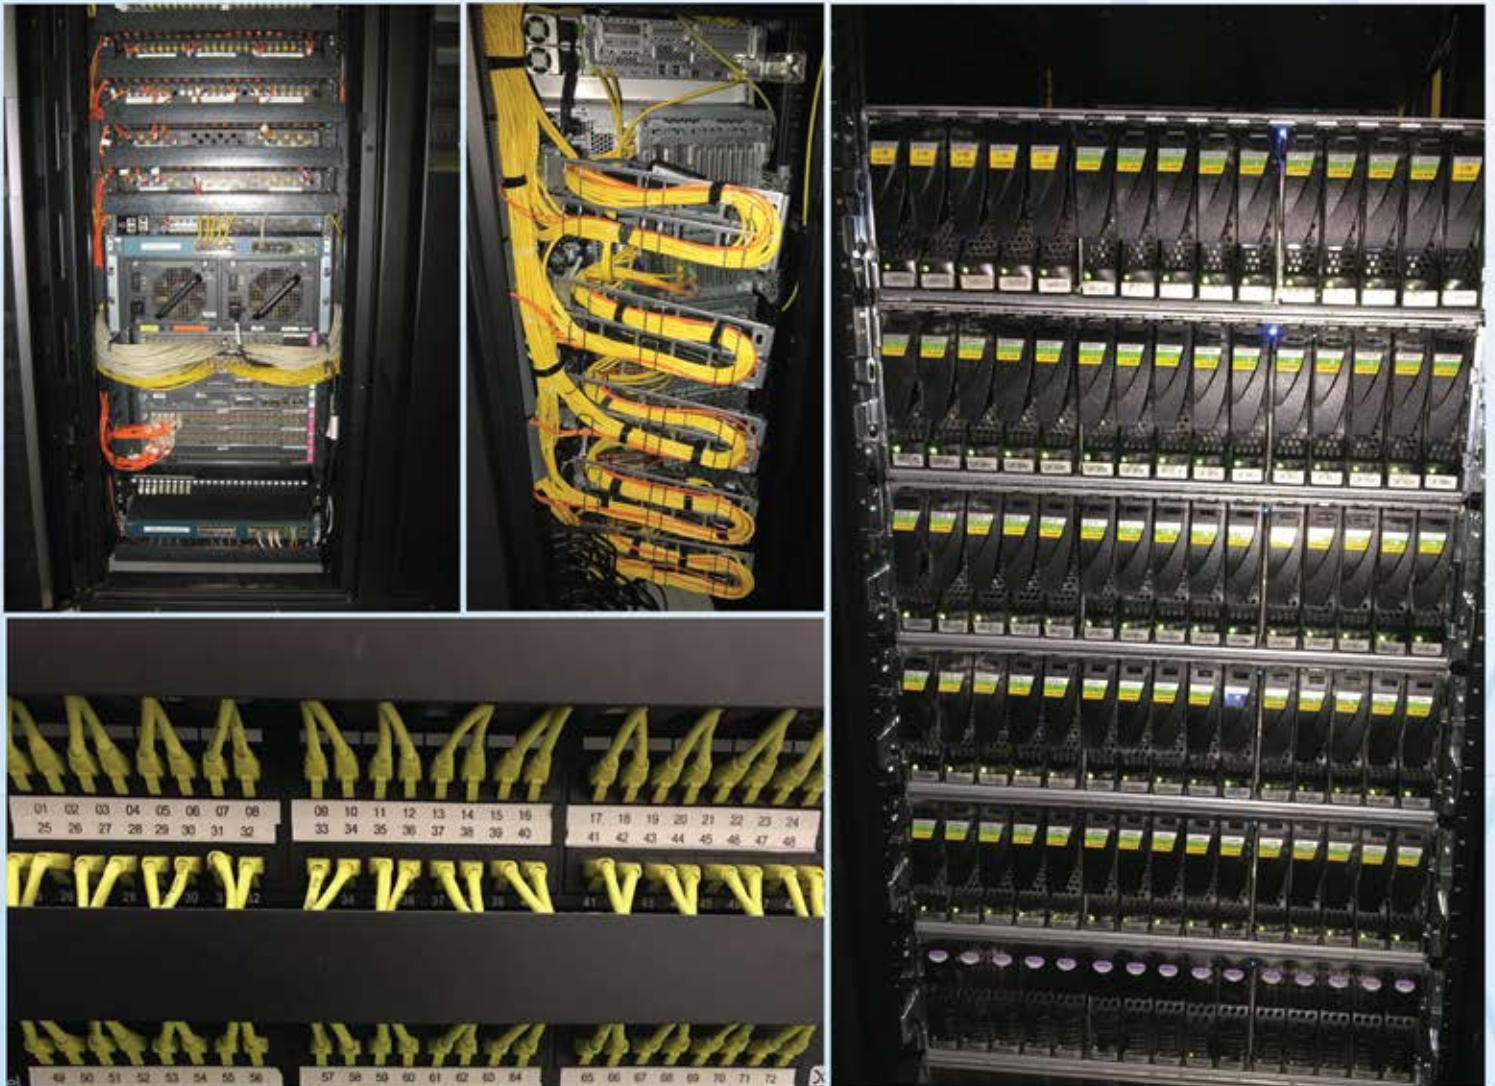

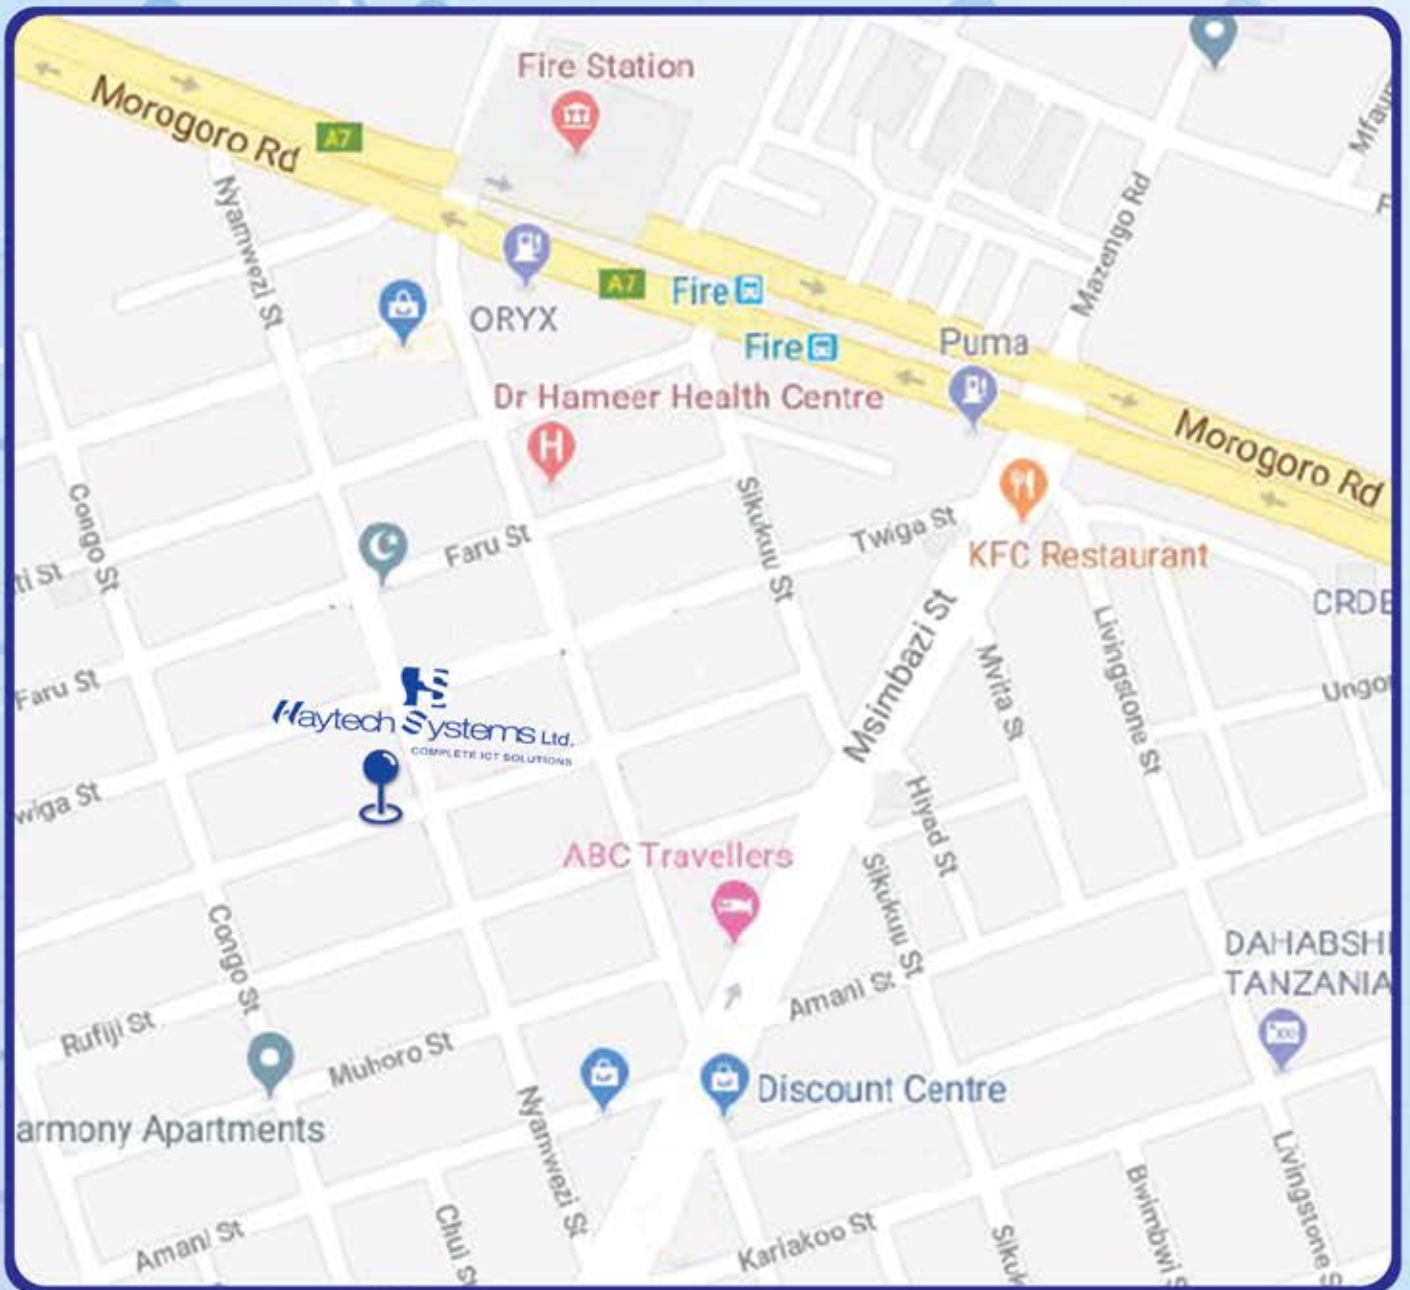

OUR PRODUCTS AND SERVICES

› IT Infrastructure Solution

An IT Infrastructure influences companies with a positive effect on their sales and revenues. It structures a stronger base for companies to conduct their operations and control management. It is therefore crucial to have an IT substructure introduced in a company to control OPEX and increase work efficiency.

A well-organized IT substructure can efficiently minimize overhead costs and positively influence revenues. With fast growing businesses, IT Infrastructures can simply grow faster from the less servers initially installed into wide data holding centers while incorporating modern technology. Taking benefits of the virtually growing world, you are now able to have more than one virtual servers on a singular physical server.

A healthy IT Infrastructure is known to be more crucial then it is given credit for. Handing such infrastructures to un-professionals may negatively impact the entire organizational operations and hence need to be managed by reliable and trustworthy professionals.
